

**Lititz Run Watershed (southeastern Pennsylvania):** The Lititz Run Watershed Restoration Project has engaged citizens, scientists, and local and state government agencies as local watershed alliance partners in a coordinated set of 15 restoration projects in key locations throughout the watershed. This community is improving its water quality through a comprehensive long-term watershed management strategy that combined techniques in natural resource management, land use planning, education and community involvement in addressing non-point source pollution. These before (left) and after (right) photos show changes including a deeper stream channel and streambank vegetation recovery, just one year after restoration at a farmland site in the watershed. The Lititz Run Watershed was also honored with the Governor's Award for Environmental Excellence in 1999.

*The 12 restoration showcase watersheds were selected for their use of stream corridor restoration technology to improve the community, the environment, and water quality as endorsed in the Clean Water Action Plan. They represent a variety of geographic locations and conditions, a balance of management practice and technical design, strong local, tribal or state leadership, and partnership in stream corridor restoration.
